Re: Field Review, Mohrland Temporary Screening and Crushing Facility, Genwal Coal Company, ACT/015/032, Emery County, Utah

On April 21, 1988, Sue Linner, Harold Sandbeck and James Leatherwood of the Division, accompanied by Mr. King of Genwal Coal Company, visited the proposed Mohrland Temporary Screening And Crushing Facility site. The temporary operation of the screening/crusher equipment at Mohrland will allow Genwal Coal Company to construct the proposed permanent facilities at the mine site.

The entire site is presently disturbed, covered with coal and is being used as a coal loadout facility. According to Mr. King, the only addition to the site will be the installation of a temporary screener/crusher that is currently being used at the Crandall Canyon Mine Site.

The cutoff ditches are currently in place. The operator stated that the ditches would be upgraded and maintained. The existing sediment pond will be improved to adequately treat the water contained on site.

The post mining land use in this area will continue as a coal loadout facility as expressed by the surface owners, the Utah Railway Co. The temporary site will not be altered to accommodate the processing facilities.
